

## Usage

```
{{actions|pagename|float}}
```

This being a maintenance tool, you should *not* use this template on any article mainspace page. Transclude or substitute it on your own User page, or perhaps a subpage or a workshop page. Transclusion is suggested due to the large amount of code generated; you will also enjoy any updates.

The first parameter is required: the name of the page for which actions are to be shown, including namespace.

The second parameter is optional: a float value (**left** or **right**). If no float is specified, the template will not float. Floating a number of various instances of this template allows one to pack more into less screen.
