Template documentation

This documentation transcluded from Template:Age/doc([edit](#) | [history](#))

This template returns the number of full years between two specified dates. If the second set of parameters is not included, it will return the number of full years between a specified date and today's date.

Syntax:

```
{ {{age|year1|month1|day1|year2|month2|day2}} or  
{ {{age|year1|month1|day1}} }
```

Examples:

{ {{age|1989|7|23|2003|7|14}} } returns "13"

{ {{age|1989|7|23}} } returns "36"

When using this template to calculate a person's age at death or a person's age on a specified date (rather than the person's current age), please substitute it into the page.

Example: { {{subst:age|1989|7|23|2003|7|14}} }

Note:

This template does not check for incorrect input:

{ {{age|1980|7|14|1993|6|233}} } returns "12" (surplus days do not count as extra months)

{ {{age|1980|7|14|1993|88|14}} } returns "13" (surplus months do not count as extra years)
