

Message box meta-templates

{{ambox}} (t)

{{tmbox}} (t)

{{imbox}} (t)

{{cmbox}} (t)

{{ombox}} (t)

{{mbox}} (t)

{{fmbox}} (t)

{{dmbox}} (t)

This is the {{mbox}} or **multi namespace message box** meta-template.

This meta-template is used to build message box templates that are used on several types of pages and thus need to change style depending on what page they are used on. Based on page type detected it uses one of {{ambox}}, {{tmbox}}, {{imbox}}, {{cmbox}} and {{ombox}}.

Note that this template should only be used for message boxes that really need to adapt their style. Most message boxes do not need this and should use one of {{ambox}}, {{tmbox}}, {{imbox}}, {{cmbox}} or {{ombox}} directly. Using those templates directly means that your template will look the same on its template page and at any other place you show it, which makes it clear on what kind of pages it is supposed to be used. It also gives you access to any extra features those templates offer, and it saves some server load.

Usage

This template takes the same parameters as {{ambox}} and {{imbox}} etc. See full documentation there.

Some of the boxes this template calls only handles images of max 52px width, thus that limitation also applies to this template or you will get ugly padding problems.

Parameters

List of all parameters:

```

{{mbox
| demospace = {{{demospace}}} / main / talk / file / category / other
| type = speedy / delete / content / style / notice / move / protection
| image = none / [[Image:Some image.svg|40px]]
| imageright = [[Image:Some image.svg|40px]]
| style = CSS values
| textstyle = CSS values
| text = The message body text.
| small = {{{small}}} / left / yes
| smallimage = none / [[Image:Some image.svg|30px]]
| smallimageright = none / [[Image:Some image.svg|30px]]
| smalltext = A shorter message body text.
}}

```

Template:Mbox/doc

Note: The small parameters only have effect when the template is on an article, talk page or an "other" page. For documentation on the small parameters see {{[ambox](#)}}, {{[tmbox](#)}} and {{[ombox](#)}}. Using the small parameters when they are not valid has no effect, but also does no harm.

See also

There are several meta-templates in the mbox family:

- {{[ambox](#)}} ? For article message boxes.
- {{[tmbox](#)}} ? For talk page message boxes.
- {{[imbox](#)}} ? For file (image) page message boxes.
- {{[cmbox](#)}} ? For category message boxes.
- {{[ombox](#)}} ? For other pages message boxes.
- {{[mbox](#)}} ? Has namespace detection, for message boxes that are used on several types of pages and thus need to change style depending on what page they are used on.

Closely related meta-templates:

- {{[fmbox](#)}} ? For header and footer message boxes.
- {{[dmbox](#)}} ? For disambiguation and set index message boxes.
- {{[asbox](#)}} ? For article stub message boxes.
