

This is the `{{dmbox}}` or **disambiguation footer message box** meta-template.

This template works similarly to `{{ambox}}` and mostly uses the same parameters. The main differences are that this box uses the disambig style and only has two "type" settings.

Usage

Simple usage example:

```
{{dmbox | text = Some text.}}
```

 Some text.

```
{{dmbox | type = setindex | text = Some text.}}
```

 Some text.

Complex example:

```
{{dmbox
| type      = setindex
| image     = {{nowrap| [[Image:Schooner.svg|30px]] [[Image:List gray.svg|30px]] }}
| textstyle = color: red; font-weight: bold; font-style: normal;
| text      = The message body text.
}}
```

  The message body text.

Some other parameter combinations:

 No type and no image given (**default**)

No type and **image=none** ? No image is used and the **text** uses the whole message box area.

 type = setindex
 imageright = [[Image:Schooner.svg|33px]] 

 This article includes a list of ships with the same or similar names. 

Parameters

List of all parameters:

```
{{dmbox
| type      = disambig / setindex
| image     = none / [[Image:Some image.svg|40px]]
| imageright = [[Image:Some image.svg|40px]]
| style     = CSS values
| textstyle = CSS values
| text      = The message body text.
}}
```

type

If no **type** parameter is given the template defaults to type **disambig**.

Template:Dmbox/doc

disambig = Makes it so the `{{disambig editintro}}` is displayed when editing a page with this template on. (Means that this template internally sets the CSS id "disambig". The id is used by the javascript in [MediaWiki:Common.js](#) to determine if a page is a disambiguation page or not.)

setindex = Does *not* trigger the `{{disambig editintro}}` when editing a page.

image

No parameter = If no **image** parameter is given, the template uses the default disambig or setindex image, depending on the **type** parameter.

An image = Should be an image with usual wiki notation. 30px - 50px width are usually about right depending on the image height to width ratio. (But the message box can handle images of any size.) For example:

```
image = [[Image:Schooner.svg|30px]]
```

none = Means that no image is used.

imageright

No parameter = If no **imageright** parameter is given then no image is shown on the right side.

An image = Should be an image with usual wiki notation. 30px - 50px width are usually about right depending on the image height to width ratio. (But the message box can handle images of any size.) For example:

```
imageright = [[Image:Nuvola apps bookcase.png|40px]]
```

Anything = Any other object that you want to show on the right side.

style

Optional CSS values used by the entire message box table. Without quotation marks " " but with the ending semicolons ; . For example:

```
style = margin-bottom: 0.2em;
```

textstyle

Optional CSS values used by the text cell. For example:

```
textstyle = text-align: center;
```

text

The message body text. This message box has *italic* text as default, thus no need to manually set that.
